

## LCCC Arboretum: Investigating Nature with Tools

1. Collect found nature (natural materials found on the ground) in paper bags. Look at it closely with the magnifying glasses.
2. On the tables at the LCCC Arboretum, dissect and compare some of the nature using the scissors, plastic knives, and tweezers from the tool kits.
3. Use the eye droppers and water to see the different reactions to water.
4. Use the paper fans to predict and experiment with the effect of wind and movement on some of the nature.
